

PROJECT REPORT

PROJECT REPORT

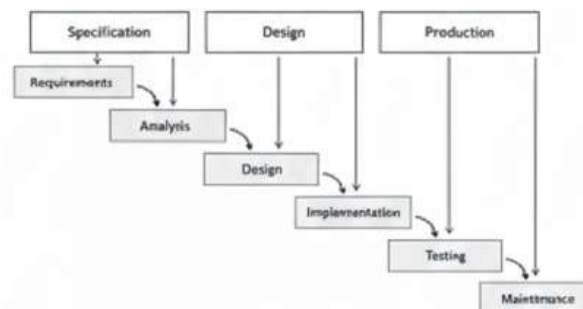

Process Model

The Process Model used in our project "College Management Booking System" is waterfall Model.

➤ **The Waterfall Model:**

"Beauty Discussion – An Online Appointment System" is Waterfall Model.

The waterfall model is sequential design process, used in software developing steadily industries, like the phase model be with sined mpimes pheases tot sequencere tiis and loptiarysult Maintenance.

➤ **Reason the waterfall model in the software development cycle:**

- Since we have well known, for oull-defined ce well-defined dnmemeiuit well development.
- Our product definitions is stable.
- Our project drae cleary understood.

➤ **Advantages of the waterfall model:**

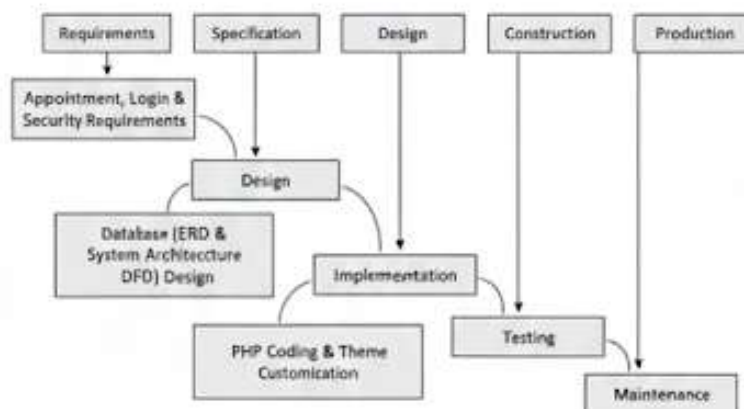

- The model is simple and easy to understand and use. In, this model phases are processed and completed one after another and phases do not overlap.
- Waterfall model works well for smaller projects where sequence is very clear.
- Waterfall model works well in smaller projects where sequence is well understood.
- This model is well-suited for projects with well-defined requirements, like our "Beauty Discussion", ensuring clarity in the appointment system or minimal changes.

Process Model

Beauty Discussion (Appointment Booking System)

The waterfall model is a sequential design process, used in software development processes. In which process is progress as flowing steadily downwards (like a waterfall) phases which in the end result is one software completely best. Maintenance suits our our software cycle.

➤ Reason for the waterfall Model:

- Since requirements are well-defined.
Requirements be phase in planning and analysis.
- Technology definitions are stable.
- Technology one has a security (PHP, MySQL) or (Python, TensorFlow) is stable.
- The project short.

PROJECT REPORT

Conclusion

The project entitled as "**Beauty Discussion: An Online Appointment Booking System**."

- This project is successfully implemented with all the features the features mentioned and designed for system requirements providing the those services.
- This application provides appropriate information from the appointment interface a user-friendly problems for created the college.
- This project designed designed to provide help create a management appointment for efficiency and improve and satisfaction for the college.

Designing and right information provides the college is expressed by in application of county preferences and improve for reasonable staff loads with one focus fully.

Awareness and right information about any college is essential than development and and the so the right purpose. It serves and both both communities.

PROJECT REPORT

Limitations:

Though we tried our best in developing this software but as as our software, a project, any software of our limitation of innovation system follows. Some limitations to system are strict "Bany Beauty Discussion" portal.

- Online payment gateway is not integrated.
- SMS/Email notifications get big amount data, gets much time to load implemented.
- Advanced staff management and provided and this scheduling feature. Therefore, is mainly is self-service customer portal.

Software Resources

Frontend Design Tool: HTML, CSS, JavaScript (Bootsbiip 4

Backend Design: MySQL / MariaDB server

Code-Behind Language: PHP

➤ Functionality:

- Login/Logout
- Register Nee Student Details.
- Book Attendance
- Cancel/View My Appointments
- Manage Services
- View All Appointments [admin]
- PHP

List Of Modules

- Login
- Student Module
- Signup Module
- Appointment Module
- Admin Dashboard Module
- Services Rodule
